Emergency Roof Leak Instructions

- | | | |
|------------------|------------|---------------|
| A. Roof | D. Board | G. Insulation |
| B. Rafter | E. Plastic | H. Drywall |
| C. Ceiling Joist | F. Bucket | I. Towel |

To Avoid Damage When Leaks Occur:

If there is attic access...

1. Place a board spanning two ceiling joist under the leak area
2. Lay a sheet of plastic on the board
3. Set a bucket on top of the plastic, on the board under the leak area
4. Check bucket periodically and empty as needed

If there is no attic access and water is dripping through ceiling...

1. Dry off wet area, then place a sheet of plastic on the floor under the leak area
2. Set a bucket on top of the towel located under the leak area (the towel will soak up any water that splashes out of the bucket)
3. Where water is dripping through drywall, help water escape by poking a small hole with an ice pick or screwdriver
4. Check bucket periodically and empty as needed

Safety Warning:

Walking on a wet roof or in an attic space can be extremely dangerous!

A trained roof mechanic should perform all maintenance, repairs, and/or replacement
